

CPE+ Computer Payments Enterprise Plus

CPE+ Next Generation Application

Paystation's CPE+ (Computer Payments Enterprise Plus) software was the first 64-bit secure payment and cheque production solution available, which has proven to be market leading in terms of adaptability, control and functionality. Our technology is designed to work with virtually all existing I.T. and financial software solutions, so that you do not have to replace, enhance or modify your existing system. CPE+ is truly a "bolt-on" solution, providing you all of the modern features required for your financial transactions without having to embark on costly hardware and software upgrades.

CPE+ comes complete with encryption technology, reporting, built-in fraud protection and the flexibility to work with other I.T. software solutions, thus future proofing your existing investments and allowing you to utilize modern banking functions. CPE+ has the power to process payments faster and safeguard against all future changes that may be required or mandated. CPE+ can be configured in-house by authorized users so there is no waiting for template changes, bank account additions or alterations to software integration. Our technology can be configured to print cheques or issue payments in any format or currency you require. Whether your business is multi-national, banking, blue-chip or public sector, CPE+ will increase efficiency and enhance security – ultimately saving you time and money, while protecting your cheque production for many years to come.

Key features and benefits:

- 64-bit application
- EFT (with email capabilities)
- Positive Pay
- Remote authorization
- Biometric controls
- Custom audit reports
- Secure cheque production
- MICR printing for blank cheques
- Encrypted signatures
- Exclusive 3-in-1 image
- Company logos
- Configured with SQL (Sequel) or Access® database
- Unlimited accounts, currencies, reports (limited only by database)

Security & Control

Authorization tools, including both biometrics and remote capabilities. Accounts, currencies and company configurations are only limited by database capabilities.

Proprietary 3-in-1 image on cheques, which includes both fraud and ID theft protection.

Multi-level administration tools, along with HASP keys, encrypted signatures, file encryption and biometrics.

Modern banking functions for Electronic Funds Transfer (EFT) and Positive Pay.

Productivity Efficiencies

- Audit reports, custom tailored and exportable to other formats (CSV, Excel...) and Crystal Reports for versatility.
- Manual cheques, if required.
- Remote Authorization to handle multi-location or travel.
- Utilize blank cheque stock, for security.
- Payments Canada compliant.
- Printer load balancing.
